Corporations

Aikoku Alpha Corporation AP Division

C1

<http://www.aikoku.co.jp/en/>

We use 5-axis machining center to make structural components for the aerospace industry as well as other complex and sophisticated components.
One of the first companies to introduce a 5-axis machining center in 1975, we have been steadily accumulating expertise in this technology since then.
We now produce a significant portion of the world's machined impellers while confidently guaranteeing that they are of the finest quality available.
We will continue to push our machining technology to new heights as we focus steadfastly on the further developing the potential of simultaneous 5-axis machining.

C2

<http://www.bub-agema.de/>

B&B-AGEMA GmbH is an independent service provider of expert design solutions for turbo machines and power plant engineering tasks. The company collected professional design experiences for more than 25 years since its foundation by Prof. Dr. Dieter Bohn in 1995 at its site in Aachen, Germany.

In particular, it provides innovative design services for gas turbines, steam turbines, compressors and combustions systems. A special focus is laid on the progressive design of major gas turbines components including innovative solutions for advanced turbine cooling technologies, DLN 100% Hydrogen combustion and increased operational flexibility. The company experts for gas turbines and steam turbines have long-year experiences in design for gas turbines varying in power output from 3 kW to 300 MW and for steam turbines up to 1000 MW. Special steam turbine design technologies for high-flexible CSP applications are available.

The company has developed advanced software for monitoring and maintenance prediction as well as for digital twin applications for gas turbines and other energy conversion systems. Engineering design software for multi-stage axial compressor and turbine design are available. **B&B-AGEMA** is deeply involved in research projects for Hydrogen generation, storage and utilization as well as in development and testing of applicable pure Hydrogen combustion concepts.

Cambridge Filter Corporation

<https://cambridgefilter.com>

C3

- Cambridge Filter Corporation historically descended from Cambridge Filter Corporation USA, have been offering the highest performance filters to leading edge and advanced technology facilities in USA;
Such as NASA and Lawrence Livermore National Laboratory.
- The highest performance and longest life Cambridge air filters for gas turbine intakes are received high evaluation of well cost performance and supplied to power plants in Japan.
- We provide our top quality “Cambridge Brand” to clients throughout the world.
- If you have any inquiries, please feel free to contact with us via website.

CRE Co., Ltd

<http://www.cre-nagoya.com/>

C4

★ Product and Service Features

- Focused on gaining customer trust, CRE offers engineering support in the areas of aircraft structural design, structural analysis, electrical and electronic design, software development, device design, productivity-focused process design, and quality assurance.
- CRE prepares and edits a variety of manuals. We also perform contracted projects associated with documentation, such as electronic conversions of documents and translations of technical documents and manuals.

★ Forte

- CRE has been involved in nearly all of major development projects in the Japanese aerospace industry, while building upon the strong relationships with aircraft manufacturers.
- CRE has experience in design and development of almost all major components of aircraft.
- Our skilled engineers, with 30 years of experience in aircraft design and development, are assigned to key roles in projects in order to manage the projects and provide training and guidance to younger engineers.

DAIHATSU

DAIHATSU DIESEL MFG.CO.,LTD.

www.dhtd.co.jp

C5

Daihatsu Diesel Mfg. Co., Ltd. was established at Osaka in 1907, where is one of the most popular spot in Japan as Umeda Sky Building now. We have been manufacturing Diesel Engines for Marine and Land over hundred years. We started to develop Gas-Turbine Engines as "Pure Made in Japan" in 1976 and 5-years later, the first memorial Gas-Turbine engine was delivered. Our turbines are used for back-up system to public facilities such as Pump Stations, Hospitals, Banks and Data-Center. Daihatsu Gas-Turbines receive high evaluation by quality and performance from many clients.

Everloy Shoji Co., Ltd.

<https://www.everloy-spray-nozzles.com/en/>

C7

Everloy provides planning, design development, manufacturing and sales of spray nozzles. In addition to the lineup of standard productions, we have been also developing new model nozzles and improving existing products. Spray nozzle performance is dependent on the factors such as pressure, flow rate, spray pattern, particle size, velocity, flow distribution and impact force distribution, etc. At Everloy, we offer the optimal spray nozzles with our analysis and evaluation technologies. Searching for greater possibilities, we develop nozzles with superior quality and creativity through constant research and development.

Creating the future with a spray nozzle

EKK

EAGLE INDUSTRY CO.,LTD.

EAGLE INDUSTRY is the Sealing Solution Company.

We engineer, manufacture and supply the seals for Jet Engine, Gas Turbine to prevent the leakage of Air and Oil, which contributes The efficiency of the Engine.

Our Brush Seal and Metal Static Seal (Actiseal-C,E,W) are used on The Ground Gas Turbine in many application.

Jet Engine Customer uses our Segmented Carbon Seal for both military application and commercial application.

Fuji Electric

Fuji Electric Co., Ltd.

<https://www.fujielectric.com/>

C8

Fuji has engaged in the thermal power plant business through the planning, design, procurement, construction, commissioning and after sales service, ever since we delivered the first steam turbine generator unit in 1959.

Fuji has promised to realize the plant design by Client requirements and high-efficiency and availability for several kind of thermal power plants of coal-fired power plant, combined power plant and co-generation power plant etc..

Fuji is a leading company in the geothermal power generation industry and has supplied geothermal power generating facilities worldwide. Geothermal energy is the renewable energy and its utilization will grow to reduce CO₂ emission.

C9

- Building a lower carbon power society

ACCELERATING JAPAN'S ENERGY TRANSITION

Japan aims to achieve a more diversified energy mix by 2030. Curious to know more about the role of gas and renewables to help the country achieve energy security, economic efficiency, environment sustainability and safety?

Read GE's whitepaper that discusses Japan's urgent need to realize stable electricity supply and economic efficiency, while addressing its climate change ambitions.

www.ge.com/gas-power/future-of-energy

Hitachi Zosen Corporation

C10

<https://www.hitachizosen.co.jp/>

Hitachi Zosen Corporation was founded in 1881 originated from Shipbuilding, now being diversified to Waste to Energy system, Desalination system and other infrastructure related businesses including power plant business, with approx.9,000 employee throughout the world. In the gas-fired power plant business, Hitachi Zosen is able to offer not only turn-key service of construction but operation and maintenance services, supported by its own IPP business for more than 15years. Currently built and operate 2 units of 110MW GE-based GTCC plants in Ibaraki prefecture, Japan. This all inclusive service brings customer promised and stable project earnings in long term basis.

Honda R&D Co., Ltd.

C11

Innovative Research Excellence, Power Unit & Energy

<https://global.honda/products/aeroengine.html>

Our research center has been striving to offer our customers the best-in-class aircraft gas turbine engines that are compact, light weight, highly-performed and environmentally sustainable especially for business jets. HF120 Engine, jointly developed with GE Aviation, received Type Certification from the U.S. Federal Aviation Administration in Dec, 2013, and a total of more than 200 aircrafts are in operation in North America, Latin America, Europe, Asia and Middle East. Our research center not only offers reliable products and the best services to our customers but also introduces competitive and innovative engine technologies into aviation industry.

GE Honda HF120 Turbofan Engine

IHI Castings Co., Ltd.(ICC)

C12

<https://www.ihico.jp/icc/>

IHI Castings Co., Ltd.(ICC) manufactures heat-resistant alloy precision castings used for aircraft jet engines, industrial gas turbines, space equipment, turbocharger for vehicles and ships, general industrial equipment and such. Since its establishment as Ishikawajima Precision Casting Co., Ltd. in 1977, we have been manufacturing and providing precision casting materials. Also, to address the growing demands, we have enhanced the production capacities of Soma and Matsumoto Plants by promoting efficiency of production lines. We will put more effort into new techniques including powder metallurgy and additive manufacturing along with precision casting, and continue to offer excellent products of near-net-shape and net-shape materials.

C13

I H I Corporation

<https://www.ihl.co.jp>

Aero Engine, Space and Defense Business Area

IHI participates in international collaborative engine programs for regional, medium, large and super large sized commercial aircrafts, and designs, develops and manufactures modules and component

parts for those engines. In addition, IHI applies the comprehensive engineering capabilities to implement engine maintenance operation and parts repairs.

IHI also participates in the research and development of engine for the genuine domestically-produced aircrafts operated by the Ministry of Defense. Besides, IHI develops and manufactures

main propulsion and power generators on naval vessels by applying aero-derivative gas turbines.

IHI is in charge of the maintenance and repair of these gas turbines, contributing to the stable operations of the Ministry of Defense.

C14

IHI Inspection & Instrumentation Co., Ltd.

<https://www.iic-hq.co.jp/>

IHI Inspection & Instrumentation Co., Ltd. (IIC) is a fully owned subsidiary of IHI. In 1974, the quality management and inspection functions of IHI were spun off to establish IIC. Therefore, from the outset, IIC has been employed many top-level experts in various fields such as sophisticated inspection technology, material and chemical analysis, strain and vibration measurements, stress and fatigue diagnostics and conduct of advanced tests using huge wind tunnels, vibration stands or other facilities. Moreover, we have an organization for developing and manufacturing state-of-the-art inspection instruments and equipment.

C15

IHI Jet Service Co., Ltd.(IJS)

<https://www.ihl.co.jp/ijs/>

IJS provides services and maintenances of Gas Turbines Equipment developed and manufactured by IHI group, supports to design and manufacture of Aero-engines and Space Equipment, and maintenances of Industrial Plants.

Based upon high-quality technology which IJS has developed and know-how which IJS has accumulated through these business, IJS also develops and manufactures Gas Turbine Generator and Aircraft Rinse System.

We continue to make an effort to create customer's delight through our assured technology and our thoughtful service, and contribute to realization of wealthy and happy society.

C16

IHI
Realize your dreams

IHI Power Systems Co., Ltd.

<https://www.ihl.co.jp/ips/>

IHI Power Systems(IPS) has been providing products using highly efficient and reliable engines and gas turbines.

In the area of power system plant business, we provide a wide variety of power generating products including gas turbines, diesel engines, and gas engines with simple-cycle, combined-cycle and co-generation application.

In addition, IPS provides remote monitoring, engine & gas turbine maintenance, and other services throughout the various product lifecycles.

In the marine power system business, IPS supplies a full range of diesel engines and Z-PELLER® Azimuth Thruster.

14-5,Sotokanda 2-Chome,Chiyoda-ku,Tokyo,101-0021 Japan
TEL: +81-3-4366-1200 FAX: +81-3-4366-1300

IHI Rotating Machinery Engineering Co., Ltd. (IRM) C17

<https://www.ihico.jp/irm/>

IHI Rotating Machinery Engineering Co., Ltd. (IRM), as a member of IHI group, provides comprehensive engineering solutions from manufacturing industrial compressors, marine turbochargers to development, design, engineering, installation and maintenance. Our experience and expertise in rotating machinery has been gained through years of manufacturing jet engines and turbochargers. We have been manufacturing compressors since 1882 and many compressors have been delivered to date. Also, IHI compressor lineup covers from 15kW to 14200kW and can meet wide range of customer requests like oil-free option for ecological purpose.

Japan Aerospace Exploration Agency C18

Aviation Technology Directorate

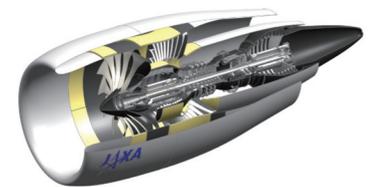

<http://www.aero.jaxa.jp/eng/>

The Aviation Technology Directorate of Japan Aerospace Exploration Agency (JAXA) has conducted R&D programs of aero-engines, represented by three key words, "Environment", "Safety", and "Frontier".

A recent R&D program is En-Core (Environmentally Compatible Core Engine Technology Research) project. Two major targets of this project are "ultra-low NOx lean premixed combustor" and "high-temperature, high-efficiency turbine". Another project, aFJR (advanced Fan Jet Research), focused on low-pressure components such as fans and low-pressure turbines, pursuing high efficiency and light weight of these components.

As well as the projects, the research programs in JAXA have been conducted for future propulsion systems. They are regarding de-carbonization, compact and high-powered core system, low NOx and noise emission, and resilient propulsion.

Japan Internal Combustion Engine Federation (JICEF) C19

Uchida Bldg. 7th Floor,
17-1, Shinbashi 1-chome, Minato-ku,
Tokyo, 105-0004 Japan
TEL +81-3-6457-9789
FAX +81-3-6457-9787
e-mail: jicef_office@jicef.org
<https://www.jicef.org/>

Japan Internal Combustion Engine Federation (JICEF) was founded in 1954, which is the Secretariat of Japanese National Member Association (NMA) for CIMAC (International Council on Combustion Engines), and also the Secretariat of JICESC, Japan Internal Combustion Engine Standard Committee for ISO, which consists of national committees for ISO/TC70 (Technical Committee on Internal Combustion Engines in ISO, International Organization for Standardization) and ISO/TC192 (Technical Committee on Gas Turbines in ISO).

JICEF is having very active and important roles for communications, coordination of opinions for common interests, promotion of mutual friendship etc. among manufacturers, users and neutral experts on reciprocating internal combustion engines and gas turbines.

Japan Patent Office C20

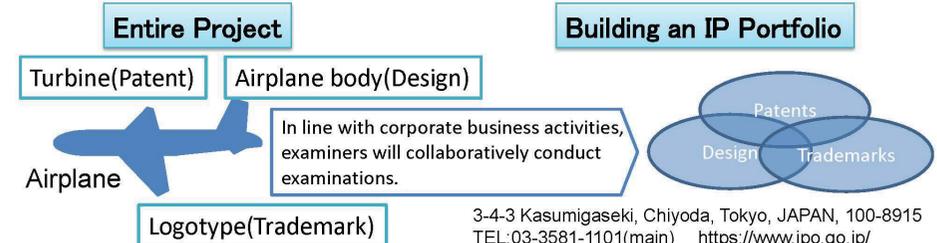

JCN 2000012090003

We are dedicated to providing excellent services.

1. Circuit Examination through Interview
-JPO examiners will reach users to conduct interview for patent applications.

2. Collective Examination for IP portfolio supporting Business Strategy
-A team of JPO examiners will conduct cross-sectionally examinations of multiple IP applications (patent, design, trademark), which will be developed into businesses inside and outside Japan.

3-4-3 Kasumigaseki, Chiyoda, Tokyo, JAPAN, 100-8915
TEL:03-3581-1101(main) <https://www.jpo.go.jp/>

Japanese Aero Engines Corporation ^{C21}

<http://www.jaec.or.jp/>

The Japanese Aero Engines Corporation was established to coordinate and manage the overall progress of multi-national collaboration programs in 1981 under the direction of the Ministry of International Trade and Industry (presently known as the Ministry of Economy, Trade and Industry) with the IHI Corporation, Kawasaki Heavy Industries, Ltd., and Mitsubishi Heavy Industries, Ltd. It is the Japanese business entity contributing to the success of international collaboration projects to develop and produce engines for civil aircraft such as V2500 and PW1100G-JM.

Kansai Electric Heat Corp. ^{C22}

<http://www.kansaidennetsu.co.jp/>

We design and manufacture the electric heater for generating the hot-air. Our heater is compatible with high temp. (max. discharge hot air temp. 1000 °C) and high air pressure (pressure resistance 5Mpa).

Our heater for generating the hot-air are widely used in various research institutes for heat resistance, durability, and bench testing of heat exchangers, combustors, compressors, output turbines, compression turbines, etc.

As an example, our heater is also used by JAXA Japan Aerospace Exploration Agency. It is being used for creating a high-temp., high-pressure simulated environment inside the engine. For conducting combustor performance tests in sector form at a jet engine combustor technology development facility aimed at developing an aircraft engine with cleaner exhaust gas.

Kawasaki Heavy Industries, Ltd. ^{C23}

<https://global.kawasaki.com/>

The origin of Kawasaki's gas turbine business is dating back to 1943, the success of first test flight of type "Ne-0" engine which is developed by Kawasaki. Nowadays, Kawasaki supplies helicopter engines to Japan self-defense force. Also, Kawasaki has been participated several international development programs for commercial airline engines. Furthermore, in order to utilize the technology developed through manufacturing of jet engines, Kawasaki started to manufacture the industrial gas turbine named "Kawasaki Gas Turbine". Kawasaki has wide range of line up from 150kW to 34,000kW and it has been installed all over the world.

Maruwa Electronic Inc. ^{C24}

<http://www.maruwa-denki.co.jp/>

Maruwa Electronic Inc. (MEI) has gone forward infinite and unique development for a high speed rotation apparatus and combustion chamber. Our product and service are essential to the design and material integrity for new design, performance and reliability improvement. High frequency drive with active magnet bearing solution that is MEI's core technology surely meets the coming turbomachinery application and supports the environmental impact.

C25

Metal Technology Co. Ltd. (MTC) was founded in 1960 and has developed into an expert in providing *metal solutions* to our customers. To meet the needs of many industries including gas turbine and aerospace industries MTC provides integrated manufacturing solutions and services through HIP treatment, Vacuum Heat treatment, Diffusion Bonding, Machining, Brazing, Welding and Additive Manufacturing. In recent years, we have also adopted Near Net Shape (NNS), environmentally friendly technology that reduces the amount of material used and improves durability and product life. In addition to our six plants in Japan, we also have subsidiaries in China and Sweden to support customers globally.

Near Net Shape
WYE Part

The world's largest HIP
unit. (Giga-HIP)

C26

power.mhi.com

Mitsubishi Power, a power solutions brand of Mitsubishi Heavy Industries, Ltd. (MHI), developing power generation technologies that reduced environmental impact, including CO₂ emissions.

We are developing the gas turbines for utility power, and industrial use and aero-derivative, and can be applied in a wide range of power output from 30 MW to 1330 MW.

We are also developing a wide range gas turbine series with 100% hydrogen fuel. Mitsubishi Power is creating a future that works for people and the planet by developing innovative power generation technology and solutions to enable the decarbonization of energy and deliver reliable power everywhere.

Mitsui E&S Machinery Co., Ltd.

C27

MITSUI E&S

<https://www.mes.co.jp/>

Mitsui Engineering & Shipbuilding Co., Ltd. has shifted to a holding company, named Mitsui E&S Holdings Co., Ltd. Each business is assigned to newly established three operating companies and "Mitsui E&S Machinery" succeeded gas turbine business.

Mitsui's industrial gas turbine development has started from 1950, and the first machine was delivered in 1954. We keep proposing good systems to meet customer's various requests.

-SB Series (Mitsui's gas turbines): 1MW~24MW

-MSC Series (Packaging Solar Turbines' gas turbines): 3MW~15MW

Nakakita Seisakusho Co., Ltd.

C28

<https://www.nakakita-s.co.jp/>

Since foundation in 1930, we have been engaged in research and development of fluid control system with a central focus on valves, and aspiring to be a company, which can make best proposals to customers ahead of the needs of the times.

We're producing valves for gas turbine as an overall manufacturer. Products line-up you can use at the wide process, including high/low-temperature and high-pressure line. We can supply high quality control valves (pneumatic/hydraulic/servo/electric-motor operated), butterfly, self-operated and safety valves, which has been verified by our high-accuracy inspection facilities including precise Cv measurement and are applicable to customer's various requests.

C29

NGK SPARK PLUG CO., LTD.

<https://www.ngkntk.co.jp/english/>

NGK SPARK PLUG CO., LTD., headquartered in Nagoya, Japan, is a comprehensive ceramics processing manufacturer. We hold a world leading share of spark plugs and automotive sensors for internal combustion engines and also offer a broad lineup of semiconductor packages, cutting tools, bio ceramics and industrial ceramics.

Our global network of sales and manufacturing organizations with over 15,000 employees offer value creation to the world. We are now contributing to a sustainable society by developing products related to the environment energy, next generation vehicles and the medical field.

The company's belief is to embrace the challenge of new era under the catch-phrase of "manufacturing only one and number one product".

NIPPON KAIJI KYOKAI (ClassNK)

C30

ClassNK is a ship classification society dedicated to ensuring the safety of life and property at sea and protecting the marine environment. With over 120 years of accumulated knowledge and expertise, ClassNK provides surveying services to certify both ships in construction and those already in service that comply with the technical rules developed by the Society and international conventions.

ClassNK www.classnk.com

Nippon Muki Co., Ltd.

C31

<https://www.nipponmuki.co.jp/>

We make new clean value and help to control the clean environment as leading company of air filter.

Air filter protects air compressor from dust and prevents for drop of the generation efficiency. We started the sales to Gas Turbine (GT) customer from 1993. Now many GT customer in Japan are using and satisfying our products.

Air filter for GT are requested as high efficiency and long life. Because we have a lot of filter lineup, technical knowledge, and experiences, we can propose the best filter based on the customer's environment and request. Please feel free to contact us.

NTN corporation

C32

<https://www.ntnglobal.com>

For New Technology Network

NTN

NTN has manufactured and supplied a wide range of bearings and driveshafts to meet customer needs across a variety of applications and industries since its establishment.

We design, manufacture, and provide bearings globally for main shaft of gas turbine engine. Especially, in aerospace application, we have supplier approvals from top 4 jet engine manufacturers in the world. Our firm adherence to quality has earned high reputation and reliance.

Headquartered in Osaka, Japan, we have plants specialized in aerospace bearings in Kuwana, Japan and Argonay, France.

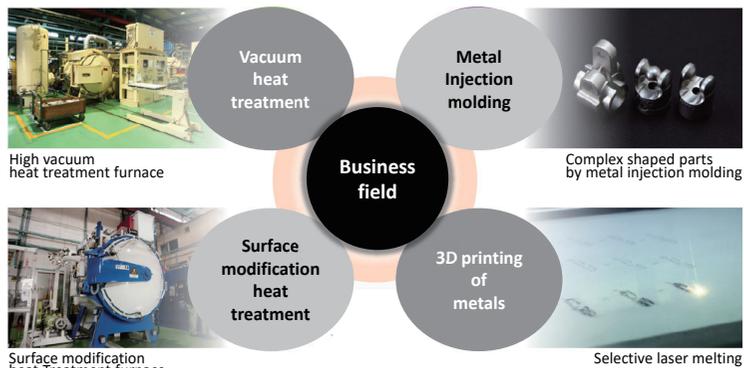

Osaka Yakin Kogyo Co., Ltd.

<http://www.osakayakin.co.jp>

C33

Based on technology cultivated for over 80 years, we offer vacuum heat treating, vacuum brazing and surface modification for heat-resisting alloys used for gas turbine. We also produce complex shaped parts by metal injection molding and 3D printing of metals.

It proposed a metal thermal processing technology to the total.

Pulstec Industrial Co., Ltd.

C34

Pulstec Industrial Co., Ltd. was established in 1969 as a test equipment company in Japan.

Our *"Portable X-ray Residual Stress Analyzer (μ-X360s)"* is the world's lightest and smallest analyzer. The features are "quick and easy setup" and "its fast non-destructive measurement".

<https://www.pulstec.co.jp/>

Rolls-Royce Japan

C35

PIONEERING THE POWER THAT MATTERS

Rolls-Royce pioneers cutting-edge technologies that deliver clean, safe and competitive solutions to meet our planet's vital power needs.

Rolls-Royce's ties with Japan go back over 120 years, and today we are one of the world's leading global power groups supporting Japanese customers through core operating businesses: Civil Aerospace, Defence, Power Systems and Electrical.

We have pledged to achieve net zero greenhouse gas emissions in our operations by 2030 (excluding product testing) and joined the UN Race to Zero campaign in 2020, affirming our ambition to play a fundamental role in enabling the sectors in which we operate achieve net zero carbon by 2050. Our sustainability strategy is built around three pillars – improving the efficiency of the gas turbine, supporting the introduction of 100% SAF, and developing new technologies such as electrical and the use of hydrogen.

<https://www.siemens-energy.com/apac/en.html>

Siemens Energy is a global gas turbine manufacturer with a broad lineup of products ranging from small, multi-MW industrial applications to large, 600 MW class applications. We are a leading company in reducing environmental impact with good flexibility with various fuels such as hydrogen. We offer total solutions that are optimal for customers who are committed to energy conservation and decarbonization, from centralized power generation to distributed power generation, by offering a complete lineup including battery and thermal storage, in addition to our track record and knowledge as an OEM of gas turbines, steam turbines, generators, plant control system and HRSG and EPC in power generation.

**TOKYO GAS
ENGINEERING SOLUTIONS**

C39

<https://www.tokyogas-es.co.jp/en/>

Energy Advance Co., Ltd. and Tokyo Gas Engineering Co., Ltd. merged on April 1, 2015 and started a new chapter in their history as Tokyo Gas Engineering Solutions Corporation.

We are a provider of comprehensive energy solutions to make your facilities more energy efficient using renewable energy. Our approach include smart energy networks with concept of “local production local consumption of heat and electricity” based on cogeneration system. We also help customers meet engineering requirements of LNG receiving terminals and city gas distribution network.

Our mission is to contribute to sustainable, safe and stable society through engineering solutions.

EthosEnergy

富永物産株式会社

C40

<https://ethosenergy.com/>

TOMINAGA & Co.,Ltd. was founded in 1939, and our Gas Turbine business has more than 30 years of history.

EthosEnergy, whom Tominaga has served as distributor, is a joint venture between Wood Group GTS and TurboCare of Siemens group. EthosEnergy is a leading independent service provider of rotating equipment services and solutions to the power, oil & gas and industrial markets.

Globally, their services include power plant engineering, procurement and construction; facility operations & maintenance; design, manufacture & application of engineered components, upgrades & re-rates; repair, overhaul & optimization of gas & steam turbines, generators, pumps, compressors and other high-speed rotating equipment.

Their products and service will provide the maximum cost merit for customers. It is not only brought by low initial cost but also their high-standard technologies which make turbines operation optimized truly. “Delivering 15% life cycle value improvement on your power generation and mechanical drive assets”, they state loudly.

TOSHIBA ENERGY SYSTEMS & SOLUTIONS CORPORATION<https://www.toshiba-energy.com>

Toshiba Energy Systems & Solutions Corporation was established on October 1st, 2017 by spinning off Energy Systems & Solutions Company and Nuclear Energy Systems & Solutions Division from Toshiba Corporation.

Toshiba Eco Technologies Give Energy to the Future.

We also provides IoT solutions by combining business and managerial know-how with our accumulated know-how/data.

C41

Toshiba Plant Systems & Services Corporation C42<https://www.toshiba-tpsc.co.jp/>

Toshiba Plant Systems & Services is a comprehensive engineering constructor that globally carries out integrated operations ranging from planning and engineering to procurement, construction and field services. Using our solid technological capabilities as a foundation, we aim to offer technologies and quality that accurately respond to the voices of our customers. By doing so, we seek to achieve further growth and development as a company that is widely trusted and chosen by people in Japan and overseas.

Toyo Controls Co.,Ltd

C43

<https://www.toyocontrols.co.jp/><https://www.maxmachinery.com/>

Toyo Controls & Max Machinery have been offering for over 30 years application such as hydraulic fluids and jet fuels for aviation hydraulic components/servo flow control valve test stands and gas turbine combustor test stands as well as automotive gasoline & diesel engine fuel metering test stands, marine engine, small engine test and chemical materials in MAX's liquid high temperature precision positive displacement flow measurement technology based on the highest levels of precision, craftsmanship and performance & long term durability & safety. MAX 4-Radial piston/ Helical rotor/Rotor gear types PD flowmeters for flow range (0.05mL/min to 540L/min) are know for exceptional accuracy (within $\pm 0.2\%$ of rdg, high resolution and fast time constant output), wide range(1000:1 over), Bi-Directional flow, low-high temperature operating(-40°C~225°C), high pressure(3000psi/6000psi/7250psi) and ability to measure fluid of any viscosity(0.5~500,000cps). Our standards stringent the performance of our products is unparalled.

Precision EDM material for Turbine Blade, Graphite : TTK-5

- Enable micromachining No bent even with ultra-fine pin such as $\Phi 0.0019$ inch
- Reducing Machining Time Compared to metal, it has good workability and speed up machining
- No Burrs Since no burrs are generated during cutting, it can be used for EDM immediately after machining
- No Deformation Graphite electrodes do not deform due to cutting resistance or heat during EDM like metal, so accurate EDM processing is feasible

For Turbine Blade Grooves and Holes, TTK-5 is suitable as an electrode material for EDM processing

Sample Size 2x2x2 inch

TOYOTA

<http://www.toyota-global.com/>

Toyota started development of the automotive gas turbine in 1964. The idea of “the gas turbine hybridization” was succeeded to the PRIUS. The technologies developed since have been utilized for the automotive turbocharges and other products of Toyota Turbine and Systems Inc. We continue to pursue R&D for various applications of the gas turbine, including potential for use in future mobility. I would appreciate any advice members and supporting members of the Gas Turbine Society of Japan may provide.

Turbo Systems United Co., Ltd.

C46

<https://www.turbo.co.jp/en>

BB and IHI joint venture

Turbo Systems United Co., Ltd. (TSU) was established on October 1, 1998 as a joint venture of ABB and IHI Corporation.

TSU is committed to provide ABB and IHI turbocharger products to engine builders and end-users in Japan with best quality as well as first class services and expertise.

TSU is the sales and service organization for ABB and IHI turbocharger products in Japan applied on large diesel and gas engines for ships, power stations, gen-sets, diesel locomotives and large off-highway vehicles.

TSU works closely with engine builders from the initial design stage, providing the highest level of application engineering and support for the customer through installation as well as operating fully integrated in the ABB worldwide turbocharging network.

Since 1985, IHI has license agreement with ABB in Switzerland (formally BBC) for production of ABB turbochargers.

Professor Hoshio Tsujita

<https://mech.ws.hosei.ac.jp/tsujita-lab/index.html>

The research subjects in the fluid engineering laboratory at Hosei University are emphasized on the reduction of secondary flows related to passage vortex, horseshoe vortex, tip leakage vortex and so on, and on the improvement of performance characteristics of turbomachines. The recent research programs for axial turbines are the improvement of aerodynamic performance of highly loaded turbine cascade with high turning angle by the reduction of the loss due to the tip leakage flow, by using both the experimental and the numerical methods. The feasibility study for the application of transpiration cooling to the axial turbine is also conducted by the numerical method. Those for the turbocharger are devoted to the controls of the rotating stall and the surge in the centrifugal compressor and to the clarification of the influences of nozzle vane on the circumferential uniformity of flow field at the inlet of radial turbine impeller.

We are currently studying transport phenomena in solid oxide fuel cells (SOFCs), solid oxide electrolyzers (SOEs) and reformers. In particular, to improve the performance and durability of SOFCs and SOEs, microstructure of porous electodes are investigated by using a focused ion beam and scanning electron microscope (FIB-SEM). Numerical simulations are also conducted for the thermofluid and electrochemical fields. In view of energy carrier, studies on ammonia are ongoing with special emphasis on decomposition/reforming reactions. Previously, we also made performance analyses for hybrid systems consisting of micro-GT and SOFC fed with biogas.

In our laboratory, combustion, and heat and mass transport phenomena are the major topic based on thermodynamics, fluid dynamics, and thermochemistry to realize clean and low-carbon energy technologies. A complex physics in which the turbulence and the chemistry interact with each other is investigated to clarify the characteristics, to construct the mathematical models, and to perform the numerical simulation of such multiscale and multiphysics phenomena among gas, solid, and liquid three phases. In addition, the proposed models are applied to industrial applications to contribute to the society by means of the massively parallel large-scale computing.

We are studying mathematical modeling and the computation using supercomputers. One of our primary projects is multi-physics computational fluid dynamics (MCFD), creating mathematical models governing complex physics associated with flow dynamics together with nonequilibrium condensation. We've developed the in-house MCFD application: Numerical Turbine (NT) which can simulate unsteady wet-steam and moist-air flows in gas- and steam-turbines. NT has achieved unsteady whole annulus multi-stage simulations of transonic compressor and steam turbine. NT is currently expanding toward Digital Twin Numerical Turbine. Supercritical-fluids Simulator (SFS) is another MCFD. SFS can simulate flows of arbitrary substance under supercritical state together with phase transition to gas and liquid. We are simulating supercritical water, CO₂ and hydrocarbon flows. Currently SFS is applied to the simulation of supercritical CO₂ flows in radial compressor considering nonequilibrium condensation.

 : Prof. Yoshiki Niizeki

FEFML updated in 2018, began working on both experimental and numerical analysis to improve the performance and reliability of turbomachinery.

In this laboratories, we have carried out our own unique efforts, such as the application of MRI to fluid measurements. The following items are investigated now.

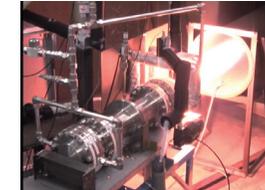

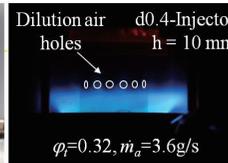

- * New experimental method to investigate gas turbine heat transfer and flow field of turbomachinery, such as MRI, X-ray CT, LIV, PIV etc.
- * Higher efficient film cooling configurations and the mechanism of its high efficiency
- * Swirling flow in turbomachine diffuser
- * Wet steam and two-phase flow behavior. In particular, measurement of two dimensional distribution of unsteady water film thickness using near infrared.

Materials and Manufacturing Processes—

- The major research project is to evaluate the properties and reliabilities of heat-resisting alloys used for gas turbine for airplanes and power plants. The study intends the alloys actually used for present engine of airplane and alloy designated for future engine, and has a purpose to analyze the damage mechanism under various mechanical loads. The aircraft engine and the turbine rotor blade of the power generation gas turbine are received flue gases that exceed 1500° C and rotate at high speed. To improve fuel efficiency and reduce emissions from gas turbine, Turbine Entry Temperatures (TETs) of the aero engine have risen to 1700° C. But engine designers are looking for TET of 1800° C in order to increase engine efficiency. Materials developments in all turbine components, combustors, blades, and discs, are critical to achieving this. The Ni based superalloys are used for the turbine parts used under such a severe environment. The excellent Ni based superalloys in the creep property are put to practical use in the aircraft engines. We focus on understanding the fundamental mechanisms determining the mechanical properties of Ni based superalloys.
- Metal Additive Manufacturing**, also known as metal 3D printing is the technology that produces three-dimensional parts layer by layer and offers the design freedom with the ability to manufacture parts from a wide range of materials. Additive manufacturing for the heat-resistant alloys are also being researched.

U19

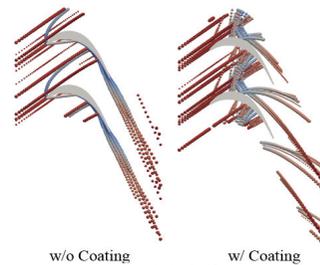

Multi-physics CFD (Computational Fluid Dynamics) simulation would be one of key technologies in research and development of various machines in near future. We are challenging to develop multi-physics CFD codes to reproduce a lot of multi-physics phenomena such as icing, sand erosion, particle deposition and so on, which can often observed in a jet engine. The developed codes have successfully be applied to fans, compressors and turbines. The numerical results provides us useful knowledge and insights that it is too difficult to obtain by experiments.
