Corporations

C1

Aikoku Alpha Corporation AP Division

<http://www.aikoku.co.jp/en/>

We use 5-axis machining center to make structural components for the aerospace industry as well as other complex and sophisticated components.

One of the first companies to introduce a 5-axis machining center in 1975, we have been steadily accumulating expertise in this technology since then.

We now produce a significant portion of the world's machined impellers while confidently guaranteeing that they are of the finest quality available.

We will continue to push our machining technology to new heights as we focus steadfastly on the further developing the potential of simultaneous 5-axis machining.

C2

<https://www.bub-agema.de/>

B&B-AGEMA company provides expert design services for gas turbines, steam turbines and other type of turbo machines. The company provides also expert simulation services on combustion, fluid flow and heat transfer topics related to all type of power plant and industrial plant components. Its thermal design expertise includes stationary and transient Finite Element Analyses and life-time predictions.

B&B-AGEMA is deeply involved in Hydrogen technology developments including innovative combustion concepts for stationary gas turbines and aero engines. The company headquarter is located in Aachen, Germany, and it was founded in 1995 by Univ.-Prof. Dr.-Ing. Dieter Bohn. Our team of experienced experts and young engineers is dedicated to develop technology solutions for an efficient and sustainable tomorrow.

C3

Cambridge Filter Corporation

- Cambridge Filter Corporation historically descended from Cambridge Filter Corporation USA, have been offering the highest performance filters to leading edge and advanced technology facilities in USA;
Such as NASA and Lawrence Livermore National Laboratory.
- The highest performance and longest life Cambridge air filters for gas turbine intakes are received high evaluation of well cost performance and supplied to power plants in Japan.
- We provide our top quality "Cambridge Brand" to clients throughout the world.
- If you have any inquiries, please feel free to contact with us via following website.

C4

<http://www.cre-nagoya.com/>

★ Product and Service Features

• Focused on gaining customer trust, CRE offers engineering support in the areas of aircraft structural design, structural analysis, electrical and electronic design, software development, device design, productivity-focused process design, and quality assurance.

• CRE prepares and edits a variety of manuals. We also perform contracted projects associated with documentation, such as electronic conversions of documents and translations of technical documents and manuals.

★ Forte

• CRE has been involved in nearly all of major development projects in the Japanese aerospace industry, while building upon the strong relationships with aircraft manufacturers.

• CRE has experience in design and development of almost all major components of aircraft.

• Our skilled engineers, with 30 years of experience in aircraft design and development, are assigned to key roles in projects in order to manage the projects and provide training and guidance to younger engineers.

DAIHATSU

DAIHATSU DIESEL MFG.CO.,LTD.

www.dhtd.co.jp

C5

Daihatsu Diesel Mfg. Co., Ltd. was established at Osaka in 1907, where is one of the most popular spot in Japan as Umeda Sky Building now.

We have been manufacturing Diesel Engines for Marine and Land over hundred years.

We started to develop Gas-Turbine Engines as "Pure Made in Japan" in 1976 and 5-years later, the first memorial Gas-Turbine engine was delivered.

Our turbines are used for back-up system to public facilities such as Pump Stations, Hospitals, Banks and Data-Center.

Daihatsu Gas-Turbines receive high evaluation by quality and performance from many clients.

EAGLE INDUSTRY CO.,LTD.

EAGLE INDUSTRY is the Sealing Solution Company.

We engineer, manufacture and supply the seals for Jet Engine, Gas Turbine to prevent the leakage of Air and Oil, which contributes The efficiency of the Engine.

Our Brush Seal and Metal Static Seal (Actiseal-C,E,W) are used on The Ground Gas Turbine in many application.

Jet Engine Customer uses our Segmented Carbon Seal for both military application and commercial application.

C7

DAIICHI SYSTEM ENGINEERING CO., LTD.

<https://www.dse-corp.co.jp/>

"Agile Engineering Design System" is an integrated solution tools delivering the Computer-Aided Engineering (CAE) and Computer-Aided Manufacturing (CAM) software for turbomachinery. It covers the entire design and manufacturing process very smoothly for Turbomachinery from 1D/Preliminary sizing through 3D/Final Design, with full fluid dynamics, mechanical stress, and vibration analysis and then generating accurate and efficient tool path while simultaneously minimizing overall design/manufacturing time.

And we also provide turbomachinery design, design review, manufacturing and performance test.

EVERLOY SPRAY NOZZLE

<https://www.everloy-spray-nozzles.com/en/>

Everloy has started spray nozzle business since 1957 and achieved a lot of success in various applications such as combustion, inlet air cooling and others.

With the growing variety of fuels, in the context of decarbonization, we provide technical support ranging from analyzing/evaluating your current solution to designing customized nozzles optimal to your application.

Contact us to find your new solution.

overseas_sales@everloy.co.jp

Fuji Electric Co., Ltd.

<https://www.fujielectric.com/>

C9

Fuji has engaged in the thermal power plant business through the planning, design, procurement, construction, commissioning and after sales service, ever since we delivered the first steam turbine generator unit in 1959.

Fuji has promised to realize the plant design by Client requirements and high-efficiency and availability for several kind of thermal power plants of coal-fired power plant, combined power plant and co-generation power plant etc..

Fuji is a leading company in the geothermal power generation industry and has supplied geothermal power generating facilities worldwide. Geothermal energy is the renewable energy and its utilization will grow to reduce CO₂ emission.

Hitachi Zosen Corporation

C11

<https://www.hitachizosen.co.jp/>

Hitachi Zosen Corporation was founded in 1881 originated from Shipbuilding, now being diversified to Waste to Energy system, Desalination system and other infrastructure related businesses including power plant business, with approx.9,000 employee throughout the world. In the gas-fired power plant business, Hitachi Zosen is able to offer not only turn-key service of construction but operation and maintenance services, supported by its own IPP business for more than 15years. Currently built and operate 2 units of 110MW GE-based GTCC plants in Ibaraki prefecture, Japan. This all inclusive service brings customer promised and stable project earnings in long term basis.

C12

HSK HOUDEN SEIMITSU KAKO KENKYUSHO., LTD

- Over our long history of more than 60 years, HSK have acquired many special processing technologies, including electrical discharge machining. Currently, we have been supplying many customers with parts used in industrial gas turbines and aircraft engines by taking advantage of our diverse processing technologies. In terms of quality assurance, we have acquired ISO and Nadcap certifications and have established a system to supply highly reliable products.
- For other industries, HSK offer advanced technologies to meet a wide range of materials and needs, such as servo presses for high-precision processing and mold manufacturing using special steels.

Honda R&D Co., Ltd.

Innovative Research Excellence, Power Unit & Energy

<https://global.honda/products/aeroengine.html>

Our research center has been striving to offer our customers the best-in-class aircraft gas turbine engines that are compact, light weight, highly-performed and environmentally sustainable especially for business jets. HF120 Engine, jointly developed with GE Aviation, received Type Certification from the U.S. Federal Aviation Administration in Dec, 2013 , and a total of more than 250 aircrafts are in operation in North America, Latin America, Europe, Asia and Middle East. Our research center not only offers reliable products and the best services to our customers but also introduces competitive and innovative engine technologies into aviation industry.

GE Honda HF120 Turbofan Engine

C13

I H I Corporation

<https://www.ihi.co.jp>

Aero Engine, Space and Defense Business Area

IHI participates in international collaborative engine programs for regional, medium, large and super large sized commercial aircrafts, and designs, develops and manufactures modules and component

parts for those engines. In addition, IHI applies the comprehensive engineering capabilities to implement engine maintenance operation and parts repairs.

IHI also participates in the research and development of engine for the genuine domestically-produced aircrafts operated by the Ministry of Defense. Besides, IHI develops and manufactures

main propulsion and power generators on naval vessels by applying aero-derivative gas turbines.

IHI is in charge of the maintenance and repair of these gas turbines, contributing to the stable operations of the Ministry of Defense.

C15

IHI Castings Co., Ltd.(ICC)

<https://www.ihi.co.jp/icc/>

IHI Castings Co., Ltd.(ICC) manufactures heat-resistant alloy precision castings used for aircraft jet engines, industrial gas turbines, space equipment, turbocharger for vehicles and ships, general industrial equipment and such.

Since its establishment as Ishikawajima Precision Casting Co., Ltd. in 1977, we have been manufacturing and providing precision casting materials. Also, to address the growing demands, we have enhanced the production capacities of Soma and Matsumoto Plants by promoting efficiency of production lines. We will put more effort into new techniques including powder metallurgy and additive manufacturing along with precision casting, and continue to offer excellent products of near-net-shape and net-shape materials.

C14

IHI Inspection & Instrumentation Co., Ltd.

<https://www.iic-hq.co.jp/>

IHI Inspection & Instrumentation Co., Ltd. (IIC) is a fully owned subsidiary of IHI. In 1974, the quality management and inspection functions of IHI were spun off to establish IIC. Therefore, from the outset, IIC has been employed many top-level experts in various fields such as sophisticated inspection technology, material and chemical analysis, strain and vibration measurements, stress and fatigue diagnostics and conduct of advanced tests using huge wind tunnels, vibration stands or other facilities. Moreover, we have an organization for developing and manufacturing state-of-the-art inspection instruments and equipment.

C16

<https://www.ihico.jp/ajs/>

IJS provides services and maintenances of Gas Turbines Equipment developed and manufactured by IHI group, supports to design and manufacture of Aero-engines and Space Equipment, and maintenances of Industrial Plants.

Based upon high-quality technology which IJS has developed and know-how which IJS has accumulated through these business, IJS also develops and manufactures Gas Turbine Generator and Aircraft Rinse System.

We continue to make an effort to create customer's delight through our assured technology and our thoughtful service, and contribute to realization of wealthy and happy society.

IHI
Realize your dreams

IHI Power Systems Co., Ltd.

<https://www.ihico.jp/ips/>

IHI Power Systems(IPS) has been providing products using highly efficient and reliable engines and gas turbines.

In the area of power system plant business, we provide a wide variety of power generating products including gas turbines, diesel engines, and gas engines with simple-cycle, combined-cycle and co-generation application.

In addition, IPS provides remote monitoring, engine & gas turbine maintenance, and other services throughout the various product lifecycles.

In the marine power system business, IPS supplies a full range of diesel engines and Z-PELLER® Azimuth Thruster.

14-5,Sotokanda 2-Chome,Chiyoda-ku,Tokyo,101-0021 Japan
TEL:+81-3-4366-1200 FAX:+81-3-4366-1300

<https://www.ihico.jp/inc/laneng>

INC Engineering Co., Ltd (INC) was established as an affiliate of IHI group handling soundproofing and anti-vibration business. The present INC is an engineering company engaged in activities across multiple fields such as "the design, manufacture, and installation of test operation facilities for aircraft engines and aircraft conversion type gas turbine engines", "the design, manufacture and installation of soundproofing and vibration isolation equipment", "consulting on preventive measures against noise and vibration", and "various test facilities and environmental protection equipment". Utilizing our fundamental technologies and a wide range of specialized technologies (acoustics, machinery, structures, thermal, fluids, and architecture), we will respond to the diverse needs of our customers by providing valuable solutions and innovative products even in fields other than the IHI group.

April 1977 Established as Ishikawajima Noise Control Co., Ltd in Shinjuku Mitsui Building.

July 1982 Head office moved to Shinjuku Ryuseido Okubo Building.

April 1997 Company name changed to "INC Engineering Co., Ltd." on 20th anniversary.

April 2023 25th anniversary of Mizuho office since 1998.

Aviation Technology Directorate

<http://www.aero.jaxa.jp/eng/>

The Aviation Technology Directorate of Japan Aerospace Exploration Agency (JAXA) has conducted R&D programs of aero-engines, represented by three key words, "Environment", "Safety", and "Frontier".

A recent R&D program is En-Core (Environmentally Compatible Core Engine Technology Research) project. Two major targets of this project are "ultra-low NOx lean premixed combustor" and "high-temperature, high-efficiency turbine". Another project, aFJR (advanced Fan Jet Research), focused on low-pressure components such as fans and low-pressure turbines, pursuing high efficiency and light weight of these components.

As well as the projects, the research programs in JAXA have been conducted for future propulsion systems. They are regarding de-carbonization, compact and high-powered core system, low NOx and noise emission, and resilient propulsion.

Japan Internal Combustion Engine Federation (JICEF) C21

70th anniversary in February 2024

Uchida Bldg. 7th Floor,
17-1, Shinbashi 1-chome, Minato-ku,

Japanese Aero Engines Corporation

<http://www.jaec.or.jp/>

The Japanese Aero Engines Corporation was established to coordinate and manage the overall progress of multi-national collaboration programs in 1981 under the direction of the Ministry of International Trade and Industry (presently known as the Ministry of Economy, Trade and Industry) with the IHI Corporation, Kawasaki Heavy Industries, Ltd., and Mitsubishi Heavy Industries, Ltd. It is the Japanese business entity contributing to the success of international collaboration projects to develop and produce engines for civil aircraft such as V2500 and PW1100G-JM.

C24

Kansai Electric Heat Corp.

<http://www.kansaiedennetsu.co.jp/>

We design and manufacture the electric heater for generating the hot-air.

Our heater is compatible with high temp. (max. discharge hot air temp. 1000 °C) and high air pressure (pressure resistance 5Mpa).

Our heater for generating the hot-airs are widely used in various research institutes for heat resistance, durability, and bench testing of heat exchangers, combustors, compressors, output turbines, compression turbines, etc.

As an example, our heater is also used by JAXA Japan Aerospace Exploration Agency. It is being used for creating a high-temp., high-pressure simulated environment inside the engine for conducting combustor performance tests in sector form at a jet engine combustor technology development facility aimed at developing an aircraft engine with cleaner exhaust gas.

Kawasaki Heavy Industries, Ltd.

The origin of Kawasaki's gas turbine business is dating back to 1943, the success of first test flight of type "Ne-0" engine which is developed by Kawasaki. Nowadays, Kawasaki supplies helicopter engines to Japan self-defense force.

Also, Kawasaki has been participated several international development programs for commercial aircraft engines. Furthermore, in order to utilize the technology developed through manufacturing of jet engines, Kawasaki started to manufacture the industrial gas turbine named "Kawasaki Gas Turbine".

Kawasaki has wide range of line up from 150kW to 34,000kW and it has been installed all over the world.

Maruwa Electronic Inc.

<http://www.maruwa-denki.co.jp/>

Maruwa Electronic Inc. (MEI) has gone forward infinite and unique development for a high speed rotation apparatus and combustion chamber. Our product and service are essential to the design and material integrity for new design, performance and reliability improvement.

High frequency drive with active magnet bearing solution that is MEI's core technology surely meets the coming turbomachinery application and supports the environmental impact.

KIGUCHI TECHNICS INC.

Japan's Top Independent Materials Testing Laboratory

KIGUCHI TECHNICS began its business in the special steel industry, and has grown as an independent materials testing laboratory specializing in metals. With the recent expanding demand in the aerospace industry, we actively leverage our expertise and skills in elevated temperature testing to ensure the reliability and safety of the aviation industry. Additionally, we proactively engage in testing related to the energy industry, offering our advanced quality and technical capabilities.

Our Services

- Sectioning & Machining, Mechanical Testing, Non-destructive Testing for Metals and Composites
- Sales and Design of Special Jigs
- Design of Test Equipment, etc.

Metal Technology Co. Ltd.

Metal Technology Co. Ltd. (MTC) was founded in 1960 and has developed into an expert in providing *metal solutions* to our customers. To meet the needs of many industries including gas turbine and aerospace industries MTC provides integrated manufacturing solutions and services through HIP treatment, Vacuum Heat treatment, Diffusion Bonding, Machining, Brazing, Welding and Additive Manufacturing. In recent years, we have also adopted Near Net Shape (NNS), environmentally friendly technology that reduces the amount of material used and improves durability and product life. In addition to our six plants in Japan, we also have subsidiaries in China and Sweden to support customers globally.

C29

Mitsubishi Power, a power solutions brand of Mitsubishi Heavy Industries, Ltd. (MHI), is developing power generation technologies that reduced environmental impact, including CO₂ emissions.

We are developing gas turbines for utility power, industrial use and aero-derivative, which can be applied in a wide range of power output from 30 MW to 1,330 MW.

We are also developing combustion technologies enabling 100% hydrogen firing and 100% ammonia firing that will be applicable to existing gas turbines.

Mitsubishi Power is creating a future that works for people and the planet by developing innovative power generation technologies and solutions to enable the decarbonization of energy and deliver reliable power everywhere.

Learn more about Mitsubishi Power industry leading technologies at

<https://power.mhi.com/products/gasturbines/index.html>

<https://power.mhi.com/special/hydrogen>

Nakakita Seisakusho Co., Ltd.

<https://www.nakakita-s.co.jp/>

Since foundation in 1930, we have been engaged in research and development of fluid control system with a central focus on valves, and aspiring to be a company, which can make best proposals to customers ahead of the needs of the times.

We're producing valves for gas turbine as an overall manufacturer. Products line-up you can use at the wide process, including high/low-temperature and high-pressure line. We can supply high quality control valves (pneumatic/hydraulic/servo/electric-motor operated), butterfly, self-operated and safety valves, which has been verified by our high-accuracy inspection facilities including precise Cv measurement and are applicable to customer's various requests.

C31

MITSUI E&S Co., Ltd.

MITSUI E&S

<http://www.mes.co.jp/>

MITSUI E&S Co., Ltd. succeeded the gas turbine business of Mitsui E&S Machinery Co., Ltd., which was an operating company in the machinery business, following a reorganization of the Mitsui E&S Group in April 2023.

Mitsui's industrial gas turbine development has started from 1950, and the first machine was delivered in 1954. We keep proposing good systems to meet customer's various requests.

-SB Series (Mitsui's gas turbines): 1MW~24MW

-MSC Series (Packaging Solar Turbines' gas turbines): 3MW~15MW

NIPPON KAIJI KYOKAI (ClassNK)

C32

ClassNK is a ship classification society dedicated to ensuring the safety of life and property at sea and protecting the marine environment. With over 120 years of accumulated knowledge and expertise, ClassNK provides surveying services to certify both ships in construction and those already in service that comply with the technical rules developed by the Society and international conventions.

ClassNK www.classnk.com

<https://www.nipponmuki.co.jp/>

We make new clean value and help to control the clean environment as leading company of air filter.

Air filter protects air compressor from dust and prevents for drop of the generation efficiency. We started the sales to Gas Turbine (GT) customer from 1993. Now many GT customer in Japan are using and satisfying our products.

Air filter for GT are requested as high efficiency and long life. Because we have a lot of filter lineup, technical knowledge, and experiences, we can propose the best filter based on the customer's environment and request. Please feel free to contact us.

NTN corporation

<https://www.ntnglobal.com>

NTN has manufactured and supplied a wide range of bearings and driveshafts to meet customer needs across a variety of applications and industries since its establishment.

We design, manufacture, and provide bearings globally for main shaft of gas turbine engine. Especially, in aerospace application, we have supplier approvals from top 4 jet engine manufacturers in the world. Our firm adherence to quality has earned high reputation and reliance.

Headquartered in Osaka, Japan, we have plants specialized in aerospace bearings in Kuwana, Japan and Argonay, France.

Osaka Yakin Kogyo Co., Ltd.

<http://www.osakayakin.co.jp>

Based on technology cultivated for over 80 years, we offer vacuum heat treating, vacuum brazing and surface modification for heat-resisting alloys used for gas turbine. We also produce complex shaped parts by metal injection molding and 3D printing of metals.

It proposed a metal thermal processing technology to the total.

Rolls-Royce Japan Co., Ltd.

Rolls-Royce develops and delivers complex power and propulsion solutions for safety-critical applications in the air, at sea and on land. Our products and service packages enable our customers to connect people, societies, cultures and economies together; they meet the growing need for power generation across multiple industries; and enable governments to equip their armed forces with the power to protect.

Rolls-Royce's ties with Japan go back over 120 years, and 2024 is the 60th anniversary of Rolls-Royce's opening our Tokyo office. Today we are one of the world's leading global power groups supporting Japanese customers through core operating businesses: Civil Aerospace, Defence and Power Systems.

SKY Aerospace Institute

<https://www.skyaero.jp>, <https://www.el-tech.co.jp>

C39

SKY Aerospace Research Institute is a private research organization established in 2012 at EL-Technology Corporation.

The institute is working with universities, research institutes, manufacturers, users, and others to contribute to the sustainable development of the global aviation industry using technology originating in Japan.

The current theme of the Institute is "a small supersonic business jet capable of supersonic flight over land," and the planning and study of this project is being conducted in cooperation with academic societies, policy advocacy organizations, and others.

Features of SSJP-1 are as follows:

- New concept supersonic business jet with a Mach number of 1.4 and a range of 2100 nautical miles
- Low boom, low acquisition, and operating cost
- Existing turbofan engine + small fuselage
- Subsonic BJ users are the target

C38

Siemens Energy K.K.

sekk_inquiry.jp@siemens-energy.com

<https://www.siemens-energy.com/global/en/home.html>

Siemens Energy is a global gas turbine manufacturer with a broad lineup of products ranging from small, multi-MW industrial applications to large, 600 MW class applications.

We are a leading company in reducing environmental impact with good flexibility with various fuels such as hydrogen and cracked ammonia gas.

We offer total solutions that are optimal for customers who are committed to energy conservation and decarbonization, from centralized power generation to distributed power generation, by offering a complete lineup including Electrolyzer, heat pump and energy storage, in addition to our track record and knowledge as an OEM of gas turbines, steam turbines, generators, gas engines, plant control system and HRSG and EPC in power generation.

Precision EDM material for Turbine Blade, Graphite : TTK-5

- Enable micromachining No bent even with ultra-fine pin such as $\Phi 0.0019$ inch
- Reducing Machining Time Compared to metal, it has good workability and speed up machining
- No Burrs Since no burrs are generated during cutting, it can be used for EDM immediately after machining
- No Deformation Graphite electrodes do not deform due to cutting resistance or heat during EDM like metal, so accurate EDM processing is feasible

For Turbine Blade Grooves and Holes, TTK-5 is suitable as an electrode material for EDM processing

Cranfield University is a leading provider of postgraduate level engineering education, research and technology support to individuals and organisations. At the forefront of aerospace technology for over 60 years, we deliver multi-disciplinary solutions to the complex challenges facing the aviation industry. Thermal power and propulsion engineering is at the very core of Cranfield's research innovation and education. Key focal areas:

1. Industry-scale experimental facilities, suitable for gaseous and liquid hydrogen research.
2. Research on power plant performance and its integration with the vehicle, diagnostics, prognostics, lifting, low emissions combustion, thermal management, AI applications, electrification, supercritical CO₂ power systems, SAF and hydrogen fuels, novel cycles, etc.
3. Industry-facing short courses on gas turbine performance, components, hydrogen for aviation and power generation, condition monitoring, systems design and integration, sustainability and the environment, etc.
4. Postgraduate education on aero and space propulsion, as well as power for sustainable land, off-shore and marine applications (<https://www.cranfield.ac.uk/courses/taught/thermal-power-and-propulsion>).

Hosei University

Fluid Engineering Laboratory

Department of Mechanical Engineering

Professor Hoshio Tsujita

<https://mech.ws.hosei.ac.jp/tsujita-lab/index.html>

The research subjects in the fluid engineering laboratory at Hosei University are emphasized on the reduction of secondary flows related to passage vortex, horseshoe vortex, tip leakage vortex and so on, and on the improvement of performance characteristics of turbomachines.

The recent research programs for axial turbines are the improvement of aerodynamic performance of highly loaded turbine cascade with high turning angle by the reduction of the loss due to the tip leakage flow, by using both the experimental and the numerical methods. The feasibility study for the application of transpiration cooling to the axial turbine is also conducted by the numerical method. Those for the turbocharger are devoted to the controls of the rotating stall and the surge in the centrifugal compressor and to the clarification of the influences of nozzle vane on the circumferential uniformity of flow field at the inlet of radial turbine impeller.

We are currently studying transport phenomena in solid oxide fuel cells (SOFCs), solid oxide electrolyzers (SOEs) and reformers. In particular, to improve the performance and durability of SOFCs and SOEs, microstructure of porous electrodes are investigated by using a focused ion beam and scanning electron microscope (FIB-SEM). Numerical simulations are also conducted for the thermofluid and electrochemical fields. In view of energy carrier, studies on ammonia are ongoing with special emphasis on decomposition/reforming reactions. Previously, we also made performance analyses for hybrid systems consisting of micro-GT and SOFC fed with biogas.

U5

AEROSPACE PROPULSION LABORATORY

Department of Aeronautics and Astronautics

Kyushu University

<https://aero.apl-kyushu.page>

In Aerospace Propulsion Laboratory, we execute many studies related to the multiphase thermo-fluid dynamics in gas/steam turbines and rocket engines.

In a liquid fuel fragmentation at air-blast atomizer, the sheet disintegration and droplet spreading events are visualized, and the spray flux distribution is quantitatively measured.

When a liquid film on a wall sheared by a hot turbulent gas flow, the film is strongly corrugated, leading to the enhancement of evaporation and shortening the dryout point.

In our laboratory, combustion, and heat and mass transport phenomena are the major topic based on thermodynamics, fluid dynamics, and thermochemistry to realize clean and low-carbon energy technologies. A complex physics in which the turbulence and the chemistry interact with each other is investigated to clarify the characteristics, to construct the mathematical models, and to perform the numerical simulation of such multiscale and multiphysics phenomena among gas, solid, and liquid three phases. In addition, the proposed models are applied to industrial applications to contribute to the society by means of the massively parallel large-scale computing.

Assistant Professor Hironori Miyazawa

Laboratory of Mathematical Modeling and Computation

Department of Computer and Mathematical Sciences

U13

We are studying mathematical modeling and the computation using supercomputers. One of our primary projects is **multi-physics computational fluid dynamics (MCFD)**, creating mathematical models governing complex physics associated with flow dynamics together with nonequilibrium condensation. We've developed the in-house MCFD application: **Numerical Turbine (NT)** which can simulate unsteady wet-steam and moist-air flows in gas- and steam-turbines. NT has achieved unsteady whole annulus multi-stage simulations of transonic compressor and steam turbine. NT is currently expanding toward **Digital Twin NT**. **Supercritical-fluids Simulator (SFS)** is another MCFD application. SFS can simulate flows of arbitrary substance under supercritical state together with phase transition to gas and liquid. We are simulating supercritical water, CO₂ and hydrocarbon flows. Currently SFS is applied to the simulation of supercritical CO₂ flows in radial compressor considering nonequilibrium condensation.

<https://www.caero.mech.tohoku.ac.jp/>

Tokyo Metropolitan University

Dept. of Mechanical Systems Engineering

Professor Koji KAKEHI

<https://www.comp.tmu.ac.jp/superalloys/>

Materials and Manufacturing Processes—

- The major research project is to evaluate the properties and reliabilities of heat-resisting alloys used for gas turbine for airplanes and power plants. The study intends the alloys actually used for present engine of airplane and alloy designated for future engine, and has a purpose to analyze the damage mechanism under various mechanical loads. The aircraft engine and the turbine rotor blade of the power generation gas turbine are received flue gases that exceed 1500° C and rotate at high speed. To improve fuel efficiency and reduce emissions from gas turbine, Turbine Entry Temperatures (TETs) of the aero engine have risen to 1700° C. But engine designers are looking for TET of 1800° C in order to increase engine efficiency. Materials developments in all turbine components, combustors, blades, and discs, are critical to achieving this. The Ni based superalloys are used for the turbine parts used under such a severe environment. The excellent Ni based superalloys in the creep property are put to practical use in the aircraft engines. We focus on understanding the fundamental mechanisms determining the mechanical properties of Ni based superalloys.
- Metal Additive Manufacturing**, also known as metal 3D printing is the technology that produces three-dimensional parts layer by layer and offers the design freedom with the ability to manufacture parts from a wide range of materials. Additive manufacturing for the heat-resistant alloys are also being researched.
